

1. **What height is the external cornice?** 300mm.
2. **What size is the external gutter overhang?** 195mm.
3. **What sizes are the internal pelmets available in?** From 250mm to 600mm.
4. **What is the maximum projection for the Skyroom?** Max projection is 4.5 metres.
5. **What width is the box gutter?** Currently there is only one box gutter size for the Skyroom, which is 185mm from the face of the ringbeam.
6. **What is the lowest and highest pitch?** The lowest pitch is 20 degrees and the highest pitch is 30 degrees.
7. **What is the gutter and cornice made from?** Aluminium extrusion.
8. **What lengths do the cornice come in?** 6 metres and after that, there will be a joint.
9. **Are the corners of the gutters welded?** No they are butt jointed and have an internal plastic sleeve that joins and waterproofs the corners.
10. **Is it available in all RAL colours?** Yes, apart from Sensations by Smart.
11. **What is the u value?** The rafter u value is 1.5W/m²k and the double glazing units with standard Planitherm is 1.1 W/m²k. Conventional insulation can be introduced into the internal pelmet to improve the u value around the internal pelmet.
12. **Is the Skyroom available in triple glazing?** No, but Atlas can supply double glazing with a u value of 0.9W/m²k.
13. **Does it need a tie bar?** We can use a hidden tie bar up to 3 metres projection and after that we use our standard box tie bar which is fixed above the upper ringbeam.
14. **What is supplied in the kit?** The roof includes glazing, framework, external gutter and cornice and internal steel grids to fix plasterboard.
15. **Do Atlas supply the plasterboard?** No as it is difficult to transport. Plasterboard sizes are available on request.
16. **Can I have it unglazed?** No, Atlas supply the glazing with a black film at the bottom which is already applied. This is to prevent seeing into the internal pelmet from above.
17. **Can spotlights be fitted internally to the pelmet?** Yes.

18. **Can external spotlights be fixed to the underside of the gutter?** No, as it would interfere with the gutter drainage.
19. **Is the pelmet ventilated?** Yes, the pelmet is ventilated at the eaves so there is a constant air flow within the pelmet.
20. **Can you put bi-folds at the front of the Skyroom?** Yes, but Atlas have to introduce an additional steel beam and corner posts to support it.
21. **What is the widest bi fold I can put in?** It depends on the sizes of the building, but it's normally around 4m.
22. **What designs can you do in the Skyroom?** At the minute we can do double hipped Edwardians (lanterns) and Edwardians.
23. **What is the downpipe made from?** The downpipe can be either PVCu or Aluminium.
24. **What will be the delivery time for a Skyroom?** White Skyroom roofs will be 4 weeks and other RALs will be 6 weeks.
25. **Is there a boss or hood on the Skyroom?** No, the roof is similar to our lantern roof product with slim line profiles.
26. **Does the plasterboard run up to the underside of the glass internally like other systems on the market?** No, Atlas has introduced an upper ringbeam , that gives the appearance of a lantern roof on top of a kerb, similar to a traditional orangery roof.
